CONTEXT

As Europe prepares its post-2028 policy framework, this interactive workshop invites you to reflect on a key question: **how can European indexes better support policies that address inequalities linked to the green and twin transitions?**

The session builds on findings from the [ST4TE](#) project, which explores the main drivers of the twin transition. It also highlights the inequalities it may create or deepen, and the policy responses needed to tackle them.

Participants will discuss how the Twin Transition Index developed by ST4TE can inform the design and coordination of policies at European, national, and regional levels. The discussion will connect these insights to the objectives of the European Green Deal.
