This report maps green, digital, and twin occupations across European regions to assess the geography of jobs related to the twin transition. Using ESCO-based taxonomies and EU-LFS microdata, it highlights the uneven distribution of employment: digital jobs cluster in metropolitan, innovation-intensive regions, while green roles are more broadly spread across sectors and skill levels. Twin occupations remain limited and predominantly anchored in green capabilities. The analysis underscores regional disparities, the importance of enabling occupations, and offers reflections on potential policy responses.
